

**Project:** Duck River Centerville Ecosystem Restoration

**Recipient:** U.S. Army Corp of Engineers, Nashville District

**Address:** U.S. Army Corps of Engineers, Nashville District, P.O. Box 1070, Nashville, Tennessee 37202

**Subcommittee:** Energy and Water

**Amount requested:** \$100,000

**Project description:** Centerville is located in central Hickman County. The project site is Centerville Park located on Highway 100 just east of downtown. The park includes several acres of level floodplain used as soccer fields, a walking track and includes a boat launch ramp to the Duck River. The Duck River is considered by the State of Tennessee to be a high quality stream that provides a number of designated public uses and a very diverse aquatic habitat.

River bank erosion and stormwater run-off from downtown Centerville are two threats to the quality of the Duck River watershed. Successful bank stabilization and proper storm water controls in the city limits would improve water quality and thereby provide environmental benefits.

Funding (\$100K) is required to sign a Feasibility Cost Share Agreement and continue the feasibility.

The project will benefit the 4<sup>th</sup> District/U.S. Government by contributing to the goals of supplying a potable water system to rural communities.
